We are happy to celebrate more than 4,000,000 computer science publications in the dblp computer science bibliography.

If you just print out the first page of each publication, you would have a pile about the size of the Empire State Building

... and a pretty irresponsible waste of paper.

dblp has consistently grown by 15% to 25% during the last six of the past years.

In 2012, again, about 460,000 new publications have been added to dblp.

In dblp, you find the publications from:

- 5,200+ conference and workshop series
  - That’s more than the number of cities in the US that featured the Super Bowl during post season."
- 1,500+ journal series
  - That’s about right times the number of computer science journals listed on Wikipedia.”
- 75,000+ table of contents
  - That’s about the amount of books in the The Ancient Library of Alexandria or more books in some countries.

These papers have been credited to:

2,000,000+
authors

Of these authors, about 60,000 researchers have been manually identified and got their bibliography attached by the dblp team.

These author’s profiles list about 20% of all publications in dblp.

dblp author profiles are linked to:

- 60,000+ academic homepage
- 11,200+ ORCID ids
- 2,500+ Google Scholar profiles
- 2,300+ Wikidata items
- 1,700+ Wikipedia articles
- and 5,500+ further ids

Daily quality and content quality control is of the highest importance to the dblp approach. Since 2005, 6,000,000+ edits have been made to this high quality database in order to correct, update, complete, and extend the metadata.

Each month, the dblp website is visited by 450,000+ users from all around the world.

On average, every 2 seconds another researcher starts working with dblp, visiting about 10 pages/second.

During peak times, the dblp website and search API often resolve 80+ requests per second.
