4 million publications | 1

We are happy to celebrate more than
4,000,000
computer science publications
in the dblp computer science bibliography.

If you just print out the first page of each publication,
you would have...

... and a pretty irresponsible waste of paper.

dblp has consistently grown by 15% to 25% during the last 16 years.

In 2017, again, about 640,000 new publications have been added to dblp.

In dblp, you will find publications from...

- **5,200+ conference and workshop series**
  - That’s more than the number of U.S. states!
  - It’s more than the number of cities in the US!
  - It’s more than the number of cities in the entire world!

- **1,500+ journal series**
  - That’s about right times the number of computer science journals listed in Wikipedia.

- **75,000+ table of contents**
  - That’s about the number of columns in the ancient library of Alexandria
  - or more talking in some discussions.

These papers have been credited to 2,000,000+
authors.

Of these authors, about 60,000 researchers have been manually identified and get their bibliography attached by the dblp team.

These authors’ profiles list about 40% of all publications in dblp.

dblp authors are linked to...

- 40,000+ academic homepages
- 11,200+ ORCID IDs
- 2,500+ Google Scholar profiles
- 2,300+ Wikidata items
- 1,700+ Wikipedia articles
- and 5,500+ further IDs

DBLP quality and correctness is one of the highest
in the field of the dblp approach. Since 2005,
6,000,000+ edits
have been added including updates to the dataset in order
to correct, update, complete, and extend the statistics.

Each month, the dblp website is visited by
450,000+ users from all around the world.

On average, every 2 seconds
another researcher starts working with
dblp, visiting about
10 requests per second.

During peak times, the dblp website and search API of-
ten resolve 80+ requests per second.
