We are happy to celebrate more than 4,000,000 computer science publications in the dblp computer science bibliography.

A pile of publications the size of the Empire State Building... and a pretty irresponsible waste of paper.

dblp has consistently grown by 15% to 25% during the last few years. In 2012, again, about 400,000 new publications have been added to dblp.

In dblp, you can find publications from...

- 5,200+ conferences and workshop series
  - That’s more than the number of cities in the US that permitted the about Star Wars patrol during Star Wars Weekends.
- 1,500+ journal series
  - That’s about the number of pages of the entire works of Homer in one series.
- 75,000+ table of contents
  - That’s about the number of pages of the ancient library of Alexandria or an entire library in some universities.

These papers have been credited to...

- About 2,000,000+ authors
- About 60,000 researchers have been manually identified and got their bibliography attached by the dblp team.
- About 20% of all publications in dblp

More publications are linked to...

- 60,000 academic homepage
- 11,200+ ORCID ids
- 2,500+ Google Scholar profiles
- 2,300+ Wikidata items
- 1,700+ Wikipedia articles
- 5,500+ further ids

Daily quality and consistent quality control is of the highest importance in the dblp approach. Since 2005,

6,000,000+ edits

have been made to improve the dblp database in order to correct, update, complete, and expand the statistics.

Each month, the dblp website is visited by 450,000+ users from all around the world.

On average, every 2 seconds

another researcher starts working with dblp, visiting about 10 pages per visit.

During peak times, the dblp website and search API of

ten resolve 80+ requests per second.
