Computer Science Bibliography

We are happy to celebrate more than **4,000,000 computer science publications** in the dblp computer science bibliography.

If you just print out the first page of each publication, you would have...

...a pile about the size of the Empire State Building.

dblp has consistently grown by 15% to 25% during the past 5 years.

In 2012, again, about 400,000 new publications have been added to dblp.

In dblp, you can find publications from...

- **5,200+ conference and workshop series**
  - That's more than the number of stars in the US that premiered the movie Star Wars in 1977
- **1,500+ journal series**
  - That’s about twice the number of computer science journals listed on Wikipedia
- **75,000+ table of contents**
  - That’s about the number of columns in the Ancilla of Alexander the Great and of the 80s

These papers have been credited to **2,000,000+ authors**.

Of these authors, about 60,000 researchers have been manually identified and got their bibliography attached by the dblp team.

These author's profiles list about 20% of all publications in dblp.

dblp author profiles are linked to...

- **60,000+ academic homepages**
- **11,200+ ORCID IDs**
- **2,500+ Google Scholar profiles**
- **2,300+ Wikidata items**
- **1,700+ Wikipedia articles**
- **5,500+ further IDs**

Daily quality and content quality control is of the highest importance to the dblp approach. Since 2013, **6,000,000+ edits** have been made including regular updates to the database in order to correct, update, complete, and expand the entries.

Each month, the dblp website is visited by **450,000+ users** from all around the world.

On average, every 2 seconds another researcher starts working with dblp, visiting about 10 pages/seconds.

During peak times, the dblp website and search API often resolve **60+ requests per second**.
