We are happy to celebrate more than 4,000,000 computer science publications in the dblp computer science bibliography.

If you just print out the first page of each publication, you would have a pile about the size of the Empire State Building... and a pretty irresponsible waste of paper.

dblp has consistently grown by 15% to 20% during the past years.

In 2017, again, about 450,000 new publications have been added to dblp.

In dblp, you even find publications from...

- 5,200+ conference and workshop series
- 1,500+ journal series
- 75,000+ table of contents

Those papers have been credited to 2,000,000+ authors.

Of those authors, about 45,000 researchers have been manually identified and got their bibliographies checked by the dblp team.

Those authors’ profiles list about 20% of all publications in dblp.

dblp author profiles are linked to...

- 60,000+ academic homepages
- 11,200+ ORCIDs
- 2,500+ Google Scholar profiles
- 2,300+ Wikidata items
- 1,700+ Wikipedia articles
- and 5,500+ further IDs

Dblp quality and content quality control is of the highest importance to the dblp approach.

Since 2003, 6,000,000+ edits have been made to the dblp BibTeX database in order to correct, update, complete, and expand the entries.

Each month, the dblp website is visited by 450,000+ users from all around the world.

On average, every 2 seconds another researcher starts working with dblp, visiting about 15 pages per session.

During peak times, the dblp website and search API of- ten resolve 80+ requests per second.
